COMPRO E COMPRESSOR FLUIDS

A HOLLYFRONTIER BUSINESS

COMPRO™ E COMPRESSOR FLUIDS – HIGH-PERFORMANCE LUBRICANTS FOR COMPRESSOR APPLICATIONS

COMPRO E Compressor Fluids are a new line of fully synthetic, shear-resistant, high-performance ester compressor fluids. These fluids are designed to provide excellent protection for reciprocating cylinder and crankcase lubrication, and rotary vane and screw compressors. COMPRO E Compressor Fluids are blended with completely ashless formulations that keep equipment clean by preventing the deposition of oxidation products such as varnish and sludge.

COMPRO E Compressor Fluids are available in ISO 46, 68, 100 and 150 viscosity grades and are designed to provide superior protection in rotary screw, rotary vane, centrifugal and reciprocating air compressors. COMPRO E Compressor Fluids meet the highest industrial standards for high-temperature, high-pressure operating environments and offer superior protection against wear, rust and corrosion in extreme conditions.

COMPRO E Compressor Fluids deliver the high level of protection your operation demands to optimize equipment performance, maximize oil life and extend drain intervals. That means less maintenance for you, and more life for your compressors.
